

METHOD OF DETECTING CHANGED CONTENTS

ABSTRACT OF THE DISCLOSURE

5 The present invention relates generally to security measures for protecting
information on a network and more particularly to detecting falsifications made in the
contents of websites on the Internet. In an embodiment of the present invention a method
of detecting the falsification of contents of a plurality of files is provided. The method
includes producing first falsification-detecting information corresponding to current
10 filenames or current contents of the plurality of files; and detecting the falsification of the
contents of the plurality of files by comparing second falsification-detecting information
corresponding to the filenames or contents of the plurality of files at the time of
registration or renewal with the first falsification-detecting information.
